- 1. The applicant is hereby notified of the date of receipt (except where the letters "NR" appear in the right-hand column) by the International Bureau of the priority document(s) relating to the earlier application(s) indicated below. Unless otherwise indicated by an asterisk appearing next to a date of receipt, or by the letters "NR", in the right-hand column, the priority document concerned was submitted or transmitted to the International Bureau in compliance with Rule 17.1(a) or (b).
- 2. This updates and replaces any previously issued notification concerning submission or transmittal of priority documents.
- 3. An asterisk(\*) appearing next to a date of receipt, in the right-hand column, denotes a priority document submitted or transmitted to the International Bureau but not in compliance with Rule 17.1(a) or (b). In such a case, the attention of the applicant is directed to Rule 17.1(c) which provides that no designated Office may disregard the priority claim concerned before giving the applicant an opportunity, upon entry into the national phase, to furnish the priority document within a time limit which is reasonable under the circumstances.
- 4. The letters "NR" appearing in the right-hand column denote a priority document which was not received by the International Bureau or which the applicant did not request the receiving Office to prepare and transmit to the International Bureau, as provided by Rule 17.1(a) or (b), respectively. In such a case, the attention of the applicant is directed to Rule 17.1(c) which provides that no designated Office may disregard the priority claim concerned before giving the applicant an opportunity, upon entry into the national phase, to furnish the priority document within a time limit which is reasonable under the circumstances.

IMPORTANT NOTICE

International application No. PCT/EP00/05941

International filing date (day/month/year) 20 June 2000 (20.06.00)

Priority date (day/month/year) 14 July 1999 (14.07.99)

**Applicant** 

ABB RESEARCH LTD et al

 Notice is hereby given that the International Bureau has communicated, as provided in Article 20, the international application to the following designated Offices on the date indicated above as the date of mailing of this Notice: AU,KP,KR,US

In accordance with Rule 47.1(c), third sentence, those Offices will accept the present Notice as conclusive evidence that the communication of the international application has duly taken place on the date of mailing indicated above and no copy of the international application is required to be furnished by the applicant to the designated Office(s).

2. The following designated Offices have waived the requirement for such a communication at this time:

AP,BA,BG,BR,CA,CN,CU,CZ,EA,EE,HR,HU,ID,IL,IN,JP,KE,LT,LV,MK,MX,NO,NZ,OA,PL,RO,SG,SI,SK,TR,UA,YU

The communication will be made to those Offices only upon their request. Furthermore, those Offices do not require the applicant to furnish a copy of the international application (Rule 49.1(a-bis)).

3. Enclosed with this Notice is a copy of the international application as published by the International Bureau on 25 January 2001 (25.01.01) under No. WO 01/06528

### REMINDER REGARDING CHAPTER II (Article 31(2)(a) and Rule 54.2)

If the applicant wishes to postpone entry into the national phase until 30 months (or later in some Offices) from the priority date, a demand for international preliminary examination must be filed with the competent International Preliminary Examining Authority before the expiration of 19 months from the priority date.

It is the applicant's sole responsibility to monitor the 19-month time limit.

Note that only an applicant who is a national or resident of a PCT Contracting State which is bound by Chapter II has the right to file a demand for international preliminary examination.

#### REMINDER REGARDING ENTRY INTO THE NATIONAL PHASE (Article 22 or 39(1))

If the applicant wishes to proceed with the international application in the national phase, he must, within 20 months or 30 months, or later in some Offices, perform the acts referred to therein before each designated or elected Office.

For further important information on the time limits and acts to be performed for entering the national phase, see the Annex to Form PCT/IB/301 (Notification of Receipt of Record Copy) and Volume II of the PCT Applicant's Guide.

IMPORTANT NOTIFICATION

International application No. PCT/EP00/05941

International filing date (day/month/year) 20/06/2000

Priority date (day/month/year) 14/07/1999

Applicant

ABB RESEARCH LTD et al

- 1. The applicant is hereby notified that this International Preliminary Examining Authority transmits herewith the international preliminary examination report and its annexes, if any, established on the international application.
- 2. A copy of the report and its annexes, if any, is being transmitted to the International Bureau for communication to all the elected Offices.
- 3. Where required by any of the elected Offices, the International Bureau will prepare an English translation of the report (but not of any annexes) and will transmit such translation to those Offices.

#### 4. REMINDER

The applicant must enter the national phase before each elected Office by performing certain acts (filing translations and paying national fees) within 30 months from the priority date (or later in some Offices) (Article 39(1)) (see also the reminder sent by the International Bureau with Form PCT/IB/301).

Where a translation of the international application must be furnished to an elected Office, that translation must contain a translation of any annexes to the international preliminary examination report. It is the applicant's responsibility to prepare and furnish such translation directly to each elected Office concerned.

For further details on the applicable time limits and requirements of the elected Offices, see Volume II of the

The following defects in the form or contents of the international application have been noted:

### Re Item V

Reasoned statement under Rule 66.2(a)(ii) with regard to novelty, inventive st p or industrial applicability; citations and explanations supporting such statem nt

The present application does not meet the requirements of Article 33 PCT, because the subject-matter of the claims does not involve an inventive step.

From the document WO-A-9636982 (D1) (see in particular abstract) the following is known in combination:

An actuation and control device for opening and/or closing an electric switchgear (4) which is connected to an electrical network (2) and has at least one fixed contact (72) and at least one movable contact (71), comprising actuation means (8) which are operatively connected to the movable contact (71) and supply the energy to perform opening/closing operations, and measuring means (204) for detecting the voltage and/or the current of at least one of the phases of said network, wherein said actuation means comprise a position control (14), which is operatively connected to the movable contact (71), and an electronic control and power supply unit (12) which receives information from said measuring means (204) and, following an operation command, sends to the actuation means electrical signals for driving said actuation means so that the movement of the movable contact (71) is controlled in relation to a predetermined operation time and to said received information.

The subject-matter of claim 1 differs therefrom in that said actuation means comprise a motor instead of a voice coil actuator.

The possibility of using coils or motors for actuating switchgears is generally known and for example from US-A-4423336 (D2) (see reference M1), wherein the substitution of a motor by a voice coil does not involve a surprising effect for the skilled man. Therefore starting from what is known from D1 the skilled man would include the general knowledge or what is known from D2 to achieve the subject-matter of claim 1 in an obvious way.

The attention of the applicant is drawn to the fact, that the definition in claim 1 that the actuation means are operatively connected to the movable contact does not lead to the fact, that the actuator directly drives the contacts.

## INTERNATIONAL PRELIMINARY International application No. PCT/EP00/05941 EXAMINATION REPORT - SEPARATE SHEET

Under this definition in claim 1 there is also included the possibility of connection means, as for example known from D2 in which the handles drive a mechanism which operates the movable contact.

In view of D1 and D2, the dependent Claims do not appear to contain any additional features which, in combination with the features of any claim to which they refer, involve an inventive step, because they seem to be slight constructional change which comes within the scope of the customary practice followed by persons skilled in the art, especially as the advantages thus achieved can readily be contemplated in advance.

### Re Item VII

### Certain defects in the international application

- 1). The independent claim is not in the two-part form in accordance with Rule 6.3(b) PCT, which in the present case would be appropriate, with those features known in combination from the prior art (document D1) being placed in a preamble (Rule 6.3(b)(i) PCT) and with the remaining features being included in a characterising part (Rule 6.3(b)(ii) PCT).
- 2). Contrary to the requirements of Rule 5.1(a)(ii) PCT, the relevant background art disclosed in the document D1 and D2 is not mentioned in the description, nor is this document identified therein.
  - It is not clear from the description, that D1 forms the base for the precharacterising part of the claims.

### **CLAIMS**

- 1. An actuation and control device for opening and/or closing an electric switchgear (4) which is connected to an electrical network (30) and has at least one fixed contact (8) and at least one movable contact (3), comprising actuation means which are operatively connected to the movable contact (3) and supply the energy to perform opening/closing operations, and measuring means (31) for detecting the voltage and/or the current of at least one of the phases of said network (30), characterized in that said actuation means comprise a motor with position control (2), which is operatively connected to the movable contact (3), and an electronic control and power supply unit (100) which receives information from said measuring means (31) and, following an operation command (1), sends to the motor (2) electrical signals for driving said motor (2) so that the movement of the movable contact (3) is controlled in relation to a predetermined operation time and to said received information.
- 2. An actuation and control device according to claim 1 characterized in that the opening and/or closing is synchronized with respect to at least one of the phases of the electrical network (30).
- 3. An actuation and control device according to one or more of the previous claims, characterized in that position control is performed by a position sensor on the motor (2).
  - 4. An actuation and control device according to one or more of the previous claims, characterized in that said motor with position control (2) is a rotary servomotor.
- 5. An actuation and control device according to one or more of the previous claims, characterized by the fact that said electronic control and power supply unit (100) comprises:
  - calculating means (11) suitable for predicting the zeros and maximums of the voltage and of the current of the phases subsequent to those detected by

5

- said measuring means (31) and for calculating the period of time between the zeros and maximums detected and those predicted.
- 6. An actuation and control device according to claim 5 characterised by the fact that said electronic control and power supply unit (100) comprises table means (34) containing predetermined information regarding the type of load and the load and network neutral connection to ground, said table means (34) being able to output a signal (35) indicating the ideal end-of-operation times in relation to said predetermined information.
- 7. An actuation and control device according to claim 6 characterized by the fact that said electronic control and power supply unit (100) comprises a timer and command unit (36) that receives in input:
  - an operation command (1) that is asynchronous in relation to the electrical network (30);
  - the signal indicating the ideal end-of-operation times (35);
- the signal indicating the subsequent predicted zeros or maximums (38); and outputs a corresponding synchronous operating command (37) that is delayed in relation to said asynchronous operating command (1) by a period of time (50) that is a function of the predetermined operation time (51) and of said signals (35, 38) indicating the ideal end-of-operation times and the predicted subsequent zeros or maximums.
  - 8. A pole of a high-voltage circuit breaker, characterized in that it comprises an actuation and control device (200) according to one or more of claims 1 to 7.
  - 9. A three-pole high-voltage circuit breaker for opening and closing a circuit connected thereto, characterized in that it comprises, for each pole, an actuation and control device (200) according to one or more of claims 1 to 7.
  - 10. A three-pole high-voltage circuit breaker for opening and closing a circuit connected thereto, characterized in that it comprises an actuation and control device (200) according to one or more of claims 1 to 7 and a mechanism (24) for coupling said device (200) to each individual pole of the circuit breaker.

11. A high or medium voltage disconnector characterized in that it comprises an actuation and control device (200) according to one or more of claims 1 to 7.
